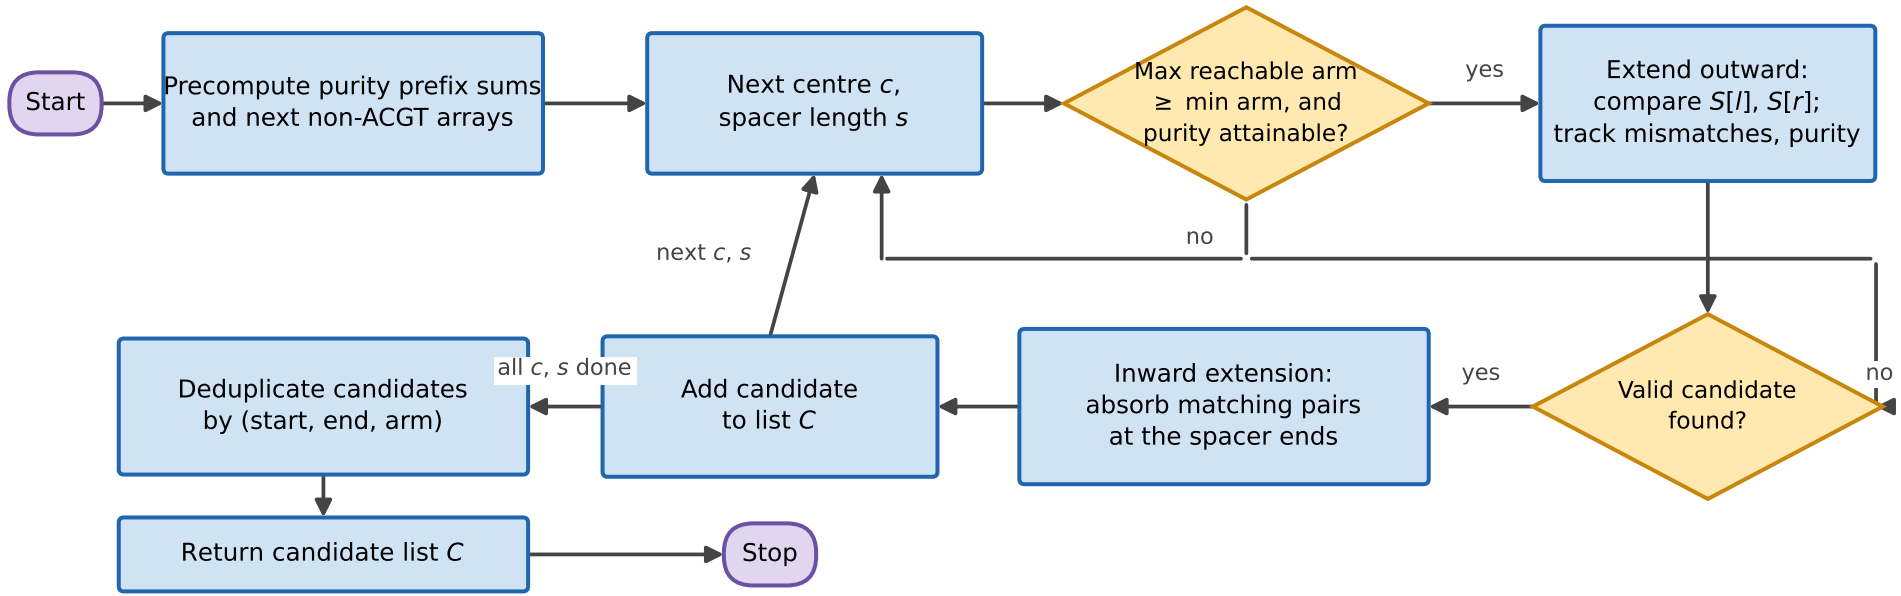
A



Start
Precompute purity prefix sums and next non-ACGT arrays
Next centre c, spacer length s
Max reachable arm ≥ min arm, and purity attainable?
yes
Extend outward: compare S[l], S[r]; track mismatches, purity
no
next c, s
Valid candidate found?
yes
no
Inward extension: absorb matching pairs at the spacer ends
Add candidate to list C
all c, s done
Deduplicate candidates by (start, end, arm)
Return candidate list C
Stop
